Summary

Full-Stack Developer | 5+ Years

Results-driven Full-Stack Software Engineer with over 5+ years of experience building scalable SaaS platforms, optimizing corporate web infrastructure, and integrating AI-driven features. Proven track record of taking products from concept to launch, acquiring beta users, and diagnosing complex technical issues to minimize downtime. Adept at leveraging modern frameworks and real-time APIs to deliver secure, responsive, and user-centric solutions.

Skills

- **Backend:** Java, Python, JavaScript
- **Frontend:** Tailwind, HTML/CSS, TypeScript
- **Framework / Platforms:** React, React Native, FastAPI, Maven, Node.js
- **Operating Systems:** Windows, Linux
- **Dev Environments:** IntelliJ, Notepad++, VS Code,
- **DevOps:** GitHub, Git, Figma, Stripe, WebSockets, JWT Authentication, AWS S3, Vercel

Experience

Skinstric AI | Remote
Full-Stack Engineer
07/2026 - current

- Architected responsive frontend interfaces using React and Tailwind CSS, integrating real-time API data flows for skin analysis detection and visualization.
- Developed dynamic UI components and skincare recommendation cards utilizing GSAP animations to enhance overall user engagement.

Lexa Home Care | Abingdon, MD
IT & Web Developer
10/2021 - 7/2026

- Managed and maintained the company website, ensuring content was consistently updated, accessible, and optimized for a seamless user experience.
- Proactively monitored site performance, successfully diagnosing and resolving front-end and back-end bugs to minimize downtime.
- Provided general IT support and technical troubleshooting to ensure smooth operational workflows for the home care staff.

Corippl | ShadowAOI LLC
Freelance Full-Stack Engineer
01/2023 - 03/2026

- Started as a personal project in 2023 to expand full-stack development capabilities; registered as a business and launched to beta users in April 2025.
- Built and launched a creator collaboration SaaS platform featuring a FastAPI/PostgreSQL backend, JWT/OAuth2 authentication, Stripe payment integration, and AWS S3 storage.
- Engineered an intelligent creator-matching system utilizing spaCy and scikit-learn for content compatibility analysis, paired with a responsive React and Tailwind CSS frontend.
- Acquired 100+ beta users before sunsetting the platform in March 2026 to pursue new opportunities.

Portfolio Projects

- **WriteFlow | AI Writing Platform** — Live Demo | GitHub
    - Architected a full-stack web application using FastAPI, PostgreSQL, and SQLAlchemy ORM, ensuring highly secure session management and efficient relational data processing.
    - Engineered real-time WebSocket integrations to deliver instant, live AI writing feedback to users with minimal latency.
    - Built an interactive analytics dashboard in React utilizing Recharts to visualize key user performance metrics, including writing streaks and words-per-minute (WPM).
- **Shipathon Application**
    - Currently developing a cross-platform mobile application leveraging React Native, Expo, and Firebase as a competitive entry for the Shipathon 2026 hackathon.
